

**Sequence Analysis – Practical Course**  
**Winter Semester 2017/18**

**Protocol NN, Name, Date**

Short introduction (1-2 sentences)

1. Each exercise is an item.
2. So you don't have to number it manually.
3. Use "verb" for printing commands, for example:  
The command `top` shows all running processes including PID, USERNAME, ... TIME, CPU, COMMAND sorted by CPU usage  
`top -U username` shows only the processes of user "username"  
Type `k` and then the PID to kill a process with the given PID.  
To enforce the termination of a process, meaning it will not be asked to close, but instantly killed, use `kill -9 PID`
4. You can have subitems in the exercise with another enumerate command.
  - (a) Sub 1
  - (b) Sub 2, etc.
5. For more information about  $\text{L}^{\text{A}}\text{T}_{\text{E}}\text{X}$  you may consult corresponding online resources, such as <https://en.wikibooks.org/wiki/LaTeX>.
